TOXICOLOGY

www.elsevier.com/locate/toxicol

Subject index of volume 193

Allergic contact dermatitis; Human and animal data; Potency ranking; Synthetic chemicals; Chemicals identified as ingredients in natural products **193**, 219

Anthraquinone dyes; Quinizarin; Contact hypersensitivity; Cross-sensitivity **193**, 261

APE/Ref-1; Genotoxic stress; Tumor **193**, 67

Arsenic; Selenium; DNA repair; PARP; XPA; Fpg **193**, 161

Base excision repair; Genome; In vitro assays **193**, 35

Base excision repair; Reactive oxygen species; DNA **193**, 43

Carcinogenesis; DNA repair; Mutant mouse models; Mutagenesis; Short-term carcinogenicity testing **193**, 171

Cell cycle; Rad51; DNA repair; Recombination **193**, 91

Checkpoint abrogation; Pentoxifylline; Tumor oxygenation; DNA repair inhibition **193**, 153

Chemicals identified as ingredients in natural products; Allergic contact dermatitis; Human and animal data; Potency ranking; Synthetic chemicals **193**, 219

Chromosome aberrations; Individual radiosensitivity; X-irradiation; DNA repair; Double-strand breaks; G1-arrest **193**, 125

Cockayne syndrome; Nucleotide excision repair; Transcription response; UV damage **193**, 79

Contact hypersensitivity; Anthraquinone dyes; Quinizarin; Cross-sensitivity **193**, 261

Cross-sensitivity; Anthraquinone dyes; Quinizarin; Contact hypersensitivity **193**, 261

Cytokines; Respiratory sensitizers; Ribonuclease protection assay; Th1 and Th2 cells; Hypersensitivity **193**, 191

DNA double strand breaks; Oxidative stress; DNA-PK **193**, 137

DNA repair inhibition; Pentoxifylline; Tumor oxygenation; Checkpoint abrogation **193**, 153

DNA repair; Arsenic; Selenium; PARP; XPA; Fpg **193**, 161

DNA repair; Individual radiosensitivity; X-irradiation; Double-strand breaks; Chromosome aberrations; G1-arrest **193**, 125

DNA repair; Mutant mouse models; Carcinogenesis; Mutagenesis; Short-term carcinogenicity testing **193**, 171

DNA repair; Rad51; Recombination; Cell cycle **193**, 91

DNA-damage signaling; DNA-repair gene; DNA-repair protein **193**, 3

DNA-PK; Oxidative stress; DNA double strand breaks **193**, 137

DNA-repair gene; DNA-repair protein; DNA-damage signaling **193**, 3

DNA-repair protein; DNA-repair gene; DNA-damage signaling **193**, 3

DNA; Base excision repair; Reactive oxygen species **193**, 43

Double-strand breaks; Individual radiosensitivity; X-irradiation; DNA repair; Chromosome aberrations; G1-arrest **193**, 125

Drug allergy; Hypersensitivity; Guinea pig; Drug **193**, 203

doi:10.1016/S0300-483X(03)00456-6

Drug evaluation; Rat; Natural killer cell activity; Flow-cytometry **193**, 269

Drug; Drug allergy; Hypersensitivity; Guinea pig **193**, 203

Flow-cytometry; Rat; Natural killer cell activity; Drug evaluation **193**, 269

Fpg; Arsenic; Selenium; DNA repair; PARP; XPA **193**, 161

G1-arrest; Individual radiosensitivity; X-irradiation; DNA repair; Double-strand breaks; Chromosome aberrations **193**, 125

Genome; Base excision repair; In vitro assays **193**, 35

Genotoxic stress; APE/Ref-1; Tumor **193**, 67

Guinea pig; Drug allergy; Hypersensitivity; Drug **193**, 203

Human and animal data; Allergic contact dermatitis; Potency ranking; Synthetic chemicals; Chemicals identified as ingredients in natural products **193**, 219

Hypersensitivity; Drug allergy; Guinea pig; Drug **193**, 203

Hypersensitivity; Respiratory sensitizers; Ribonuclease protection assay; Cytokines; Th1 and Th2 cells **193**, 191

In vitro assays; Base excision repair; Genome **193**, 35

Individual radiosensitivity; X-irradiation; DNA repair; Double-strand breaks; Chromosome aberrations; G1-arrest **193**, 125

Mutagenesis; DNA repair; Mutant mouse models; Carcinogenesis; Short-term carcinogenicity testing **193**, 171

Mutant mouse models; DNA repair; Carcinogenesis; Mutagenesis; Short-term carcinogenicity testing **193**, 171

Natural killer cell activity; Rat; Flow-cytometry; Drug evaluation **193**, 269

Nucleotide excision repair; Transcription response; UV damage; Cockayne syndrome **193**, 79

Oxidative stress; DNA-PK; DNA double strand breaks **193**, 137

PARP; Arsenic; Selenium; DNA repair; XPA; Fpg **193**, 161

Pentoxifylline; Tumor oxygenation; Checkpoint abrogation; DNA repair inhibition **193**, 153

Potency ranking; Allergic contact dermatitis; Human and animal data; Synthetic chemicals; Chemicals identified as ingredients in natural products **193**, 219

Quinizarin; Anthraquinone dyes; Contact hypersensitivity; Cross-sensitivity **193**, 261

Rad51; DNA repair; Recombination; Cell cycle **193**, 91

Rat; Natural killer cell activity; Flow-cytometry; Drug evaluation **193**, 269

Reactive oxygen species; Base excision repair; DNA **193**, 43

Recombination; Rad51; DNA repair; Cell cycle **193**, 91

Respiratory sensitizers; Ribonuclease protection assay; Cytokines; Th1 and Th2 cells; Hypersensitivity **193**, 191

Ribonuclease protection assay; Respiratory sensitizers; Cytokines; Th1 and Th2 cells; Hypersensitivity **193**, 191

Selenium; Arsenic; DNA repair; PARP; XPA; Fpg **193**, 161

Short-term carcinogenicity testing; DNA repair; Mutant mouse models; Carcinogenesis; Mutagenesis **193**, 171

Synthetic chemicals; Allergic contact dermatitis; Human and animal data; Potency ranking; Chemicals identified as ingredients in natural products **193**, 219

Th1 and Th2 cells; Respiratory sensitizers; Ribonuclease protection assay; Cytokines; Hypersensitivity **193**, 191

Transcription response; Nucleotide excision repair; UV damage; Cockayne syndrome **193**, 79

Tumor oxygenation; Pentoxifylline; Checkpoint abrogation; DNA repair inhibition **193**, 153

Tumor; APE/Ref-1; Genotoxic stress **193**, 67

UV damage; Nucleotide excision repair; Transcription response; Cockayne syndrome **193**, 79

X-irradiation; Individual radiosensitivity; DNA repair; Double-strand breaks; Chromosome aberrations; G1-arrest **193**, 125

XPA; Arsenic; Selenium; DNA repair; PARP; Fpg **193**, 161
